SOLUTIONS

High Quality, Cost Effective Doorset Solutions

Welcome

Come On In

Welcome To CDS

Complete Doorset Solutions

Complete Doorset Solutions (CDS) was founded in 2016 by Amo Ruprai, Alistair Rosier and Chris Williams.

With a sharp focus on quality, service and best value, we've achieved rapid but controlled growth since inception. We believe that growth can be attributed to our focus on personal service combined with a fully compliant product range and a flexible attitude towards winning together with our customers and clients. This focus on the simple things has resulted in CDS securing a number of major landmark projects nationwide.

Our success to date and the increased demand for our products has led to the opening of our second production facility which we are delighted will be fully operational in Newtown, Wales, in January 2019.

All CDS products are BM Trada (Q Mark) and FSC accredited and with the opening of our new facility in Wales, both this and our Latvian facility will be certified to ISO 9001 & ISO 14001.

As a CDS customer you'll benefit from:

- A fully compliant solution complete with independent 3rd party certification, providing peace of mind and reduced risk.
- The highest product quality and consistency delivering maximum client/end-user satisfaction
- Single source supply reducing on site delays and simplified communication channels .
- Fully finished product options reducing the need for painting on site and elimination of associated surface contamination leading to increased client satisfaction.
- Reduced installation times that may contribute to overall time savings in the build programme and potential financial gains for the client/end-user

Vision

To manufacture and deliver the highest quality, cost effective doorset solutions to all our customers on time every time.

Mission

To achieve our vision our mission is:

- To source the best quality components for our doorsets
- To partner with our customers in working towards their ideal solutions regularly and repeatedly
- To strive to continually improve our manufacturing processes, through innovation wherever possible, to deliver upon our customers expectation and beyond.
- To be entrepreneurial in our efforts to deliver the best possible value to our customers
- To recruit, train and retain a skilled workforce which shares in our vision and always strives to deliver on time every time, exceeding customer expectations.

Values

At CDS we value many things but above all we are determined that our values mean something to both ourselves and our customers – they are not just empty promises!

We strive to deliver the highest **QUALITY** products with **SERVICE** levels to match and seek to work in true **PARTNERSHIP** with our **CUSTOMERS**. Our **REPUTATION** means everything to us and we strive to build and maintain it through **INTEGRITY** in all we do, gaining the **TRUST** and **RESPECT** of all the **PEOPLE** who we work for and who work for us. We recognise that in any walk of life things go wrong but we will always strive to **DO THE RIGHT THING**. We have high **EXPECTATIONS** of ourselves in order to deliver upon those of our customers.

What, Who, Where?

A Little Bit About Us

What We Do

What We Do

As the name suggests, we specialise in the manufacture and supply internal doorsets into the new build construction and interior refurbishment industries.

So, what is a doorset?

As defined by **BS EN 12519**, a doorset is a complete unit comprising a door leaf (or leaves) pre-hung within a frame and fitted with all essential ironmongery components supplied and assembled from a single source.

CNC Technology

CNC technology allows us to accurately machine our doors and frames to accept the specified ironmongery as well other essentials components such as intumescent strips, glazing, smoke and acoustic seals.

Who We Do It For

Our Market Sectors

Our combined 80 years in the doors industry has afforded CDS a wealth of experience across a variety of market sectors. We understand the intricacies and individuality that doorset specification often presents and in the sectors we operate have the proven ability to provide a complete solution whatever our customers' needs may be.

Education

- Universities, Academies, Colleges of FE, Secondary & Primary Schools
- Student accommodation

Residential

- Private high & low-rise
- Social housing
- Care homes
- Retirement living

Hospitality & Leisure

- Independent hotels
- Group hotel providers
- Park homes & cabins
- Sports facilities & stadia
- Conference facilities
- Pubs, clubs & restaurants

Commercial

- Offices
- Financial
- Public sector facilities & services
- MOD

Where We Do It

Daugavpils

- Full CDS brand door manufacture from raw material to finishing
- Production capacity of 400 doorsets per week in a single shift
- Workforce of 65

Newtown

- Third-party door brand finishing facility
- Production capacity of 250 doorsets per week in a single shift
- Workforce of 12 (door finishing)

Our doorsets are manufactured, finished and assembled in our production facilities in:

Daugavpils, Latvia

Newtown, Wales

Newtown, Wales

Daugavpils, Latvia

A Little Bit About Our Products

Product Details

CDS Doorsets

CDS offers a full range of doorset options all based around a solid core leaf (or leaves). Whether it's a standard arrangement you're looking for with no specific fire, security or acoustic requirements or a doorset requiring certification in respect of any one or a combination of these critical performance criteria, we can meet the brief.

Typically we offer fire doors to FD30, FD60, FD90 and FD120, whilst our security doors are all PAS 24 accredited. Along with these we also have the capability of meeting a wide range of acoustic requirements.

At CDS we recognise that many applications call for something a little different and it may not always be possible to meet a specification using a standard door size or type. For that reason we're always willing to undertake project specific testing to provide our customers and clients the peace of mind they need, rather than relying on desk-top or indicative testing results.

As standard all CDS doors have a 10mm hardwood lipping to all four edges. Not only does this provide for a better quality finish and appearance to our doors but this helps to guard against moisture ingress to the core in areas of increased moisture such as bathrooms and wet rooms.

Security doors typically come with a thicker lipping on the two long edges, often up to 20mm, for increased strength and we also offer bespoke trimming detail when required.

Door Configurations & Handings

CDS offers a diverse range of doorset configurations and handing options as well as glazed or solid side panels, over panels and fanlights. Our bespoke manufacturing capability ensures that all our products are made to the specific requirements of our clients' project configuration needs. Besides our standard fire and PAS 24 security testing accreditations, our commitment to project specific testing and non-reliance upon indicative testing information, ensures complete peace of mind by reducing client risk in these critical aspects of project design.

Rest assured that our highly experienced technical team is on hand to guide you through the complexities of certification and deliver the right solution whatever your configuration and testing requirements in respect of acoustics, fire, security, handing and swing.

Our leaf options include single, double and leaf & a half options. Each of which can be paired with any configuration of side and overhead panels.

CDS customers often ask us how we deem a doorset to be handed and they are right to do so as other manufacturers may recognise different handing conventions. Our definitions are as follows:

Liners & Architraves

Liners & Architraves

CDS offer and stock two core liner options, though we maintain a capability of engineering more complex options to specification.

Our flat back liner and stop can be supplied to meet the requirements of NFR, FD30 or FD60 variants, incorporating intumescent strips and smoke seals as required.

As can our rebated liner option can additionally meet the requirements of FD90:

Liner finishing options

MDF: Real wood veneer wrapped, foil wrapped, fully paint finished or primed for painting on site

Softwood: Real wood veneer wrapped, Fully paint finished or primed for painting on site

Hardwood: Lacquered, Real wood veneer wrapped, fully paint finished or primed for painting on site

Architrave

In most cases architrave is supplied to match the selected liner. However, where a hardwood or softwood liner is supplied primed for painting on site, customers may opt to have our MDF architrave separately in advance for final fixing and finishing.

Where specified, an additional option to have liners and architrave grooved to allow for inconsistencies in the surrounding wall is also available.

Vision Panels

Vision Panels

CDS can produce a wide variety vision panel options dependent upon the certification levels required within the project specification. Here are some of our more widely specified glazing layouts:

Document M

Approved Document M provides official government guidance on how to meet all building regulations in respect of access to and the use of buildings, with volumes relating to both residential and non-residential construction.

It is perhaps most commonly referred to in conjunction with the Equality Act 2010 in respect of the provision of disabled access. If your project has a requirement to comply with Document M (most do) the size and shape of vision panels is restricted and our technical team will ensure your specification meets the appropriate criteria.

Glazing

Glazing offers a wide range of options and it is important to remember that your project requirements may limit the options available to you. Whether it's wired, toughened, thermal, fire rated, non-fire rated, obscured or even a combination of these attributes our tech team are on hand to ensure your glazing meets all the necessary regulations and standards in delivering the overall design brief.

Beading options

Typically, our glazing is held in place using one of two beading methods, the most popular of which is a protruding, 'bolected' or hockey stick bead. For those preferring a cleaner look to the door face, we offer a flush bead too.

Veneer Finish

Veneer Finish Doors

By far our customers' most popular choice, our veneered doors are finished to the highest standard using only 'AAA' grade veneers with matching lacquered lippings applied all four edges of the door – and of course, all accredited under the FSC and PEFC schemes.

The veneers most requested by our customers include; Oak, Walnut, Ash, Birch, Beech, and cherry.

The way a veneer is cut from a tree provides a distinctively different appearance to the grain so it is important to specify which you would prefer at point of order.

We provide both quarter cut and crown cut veneers:

Crown cut veneers present a roughly symmetrical central grain pattern characterised by a crown or cathedral-like appearance to the grain. Crown cut veneers are often seen as a more “attractive” option than Quarter cut veneers.

Quarter cut veneers have a closer, straight grained and more uniform appearance.

Laminate & Painted

Laminate Finish Doors

High Pressure Laminate (HPL) finished doors are becoming increasingly popular especially within the education and student accommodation sectors as they deliver a range of benefits to both student and the building owners and managers alike. Besides their increased impact resistance, durability and associated low maintenance costs, the vibrant array of colours available provides the aesthetic impact that makes for enhanced learning and social experiences. CDS has partnered with three leading laminate manufacturers; Eggar, Polyrey and Formica to provide a wide choice of HPL finish but should you require a product not included within our standard scope, we will make every effort to source this for you. Whether it's a realistic wood grain effect, a solid colour or something different, the choice is endless.

Painted & Primed Doors

Increasingly popular with our customers are our fully paint finished doors and we are able to offer a wide range of RAL colours to choose from.

All our fully painted doors are expertly sprayed in our factory for a perfect unblemished finish and then carefully packaged to ensure they arrive with you in first class condition.

Of course, if you prefer to paint your doors on site, to your own paint specification, you can rely on the quality of our primer coat to ensure your appointed painter can achieve the finish you're looking for.

Forest Holidays, Beddgelert

Forest Holidays Instructed CDS to produce doorsets for their newly opening Beddgelert site in Snowdonia. Consisting of 16 cabins located in a sheltered woodland glade, bordered by a tumbling river and situated in the heart of Snowdonia National Park sustainability and a natural feel was a key element in the CDS scope - Croeso i Beddgelert Snowdonia!

This project consisted of 98 doorsets delivered over a 3 month period. Due to a lack of on-site storage space, deliveries were restricted in size, presenting CDS with both logistical and financial challenges in meeting the delivery needs whilst controlling unit costs.

A product in keeping with the cabin internals resulted in CDS producing 44mm Oak veneered door leaves, set in a Solid Oak doorframe with a solid oak architrave. The door frames and doors were all treated with a clear lacquer in order to increase durability and reduce discolouration over time.

CDS partnered the oak veneer with a satin stainless steel Ironmongery pack featuring a Zoo Hardware Curved Lever on Rose.

“CDS look forward to developing our partnership with Forest Holidays over the coming months and years, together we have developed a product offering that is fit for purpose and aesthetically suitable for the application requested.”

Alistair Rosier
Sales Director ,
CDS

“We started working Complete Doorset Solutions through a referral. We found the specification and product was an improvement compared to previous products and the service was well packaged with great support from start to finish. We look forward to working with Complete Doorset Solutions again on our next project”

Mark Sheppard
Procurement Manager,
Forest Holidays

Fontenoy Apartments, Liverpool

CDS was commissioned by Create Construction Limited to supply doorsets for the Fontenoy Street student accommodation project on behalf of **Maven Capital Partners**.

Comprising 200 studio bedrooms together with associated communal areas, it was successfully completed in September 2018.

CDS supplied a total of 481 doorsets, both single and double, ranging from non-fire-rated to FD30S and FD60S.

All the door leaves were manufactured by CDS utilising Egger, Grey Beige Gladstone Oak Laminate to the faces and concealed oak lipping's to all four edges. Our high-quality primer was applied to the MDF frames and architraves ready for painting on-site.

A carefully planned and executed delivery schedule requiring 8 doorset deliveries over a 7 week period between April and June ensured project completion was both on time and within budget.

“Of all the projects we’ve completed over the last year I’ve been most impressed with the product supplied on this one. The lacquered oak lippings perfectly complemented the Egger laminate which was selected due to its superior level of durability; a prime consideration in highly demanding environments such as a student accommodation.”

Alistair Rosier
Sales Director ,
CDS

Certifications & Compliance

The vast majority of our doorsets are manufactured to meet specific testing requirements in terms of fire, security or acoustics and our certifications are always provided by third parties such as BM Trada, through BSI certificated testing houses.

We recognise that each project presents individual challenges and it's vital that testing and certification is accurate and clearly evidenced. So, whilst certification for some site specific project types can be achieved through global desktop assessments we do prefer the peace of mind and reduced risk that live test data provides our customers and we are committed to providing a fully compliant solution for every project whatever the testing requirements. We are always ready and willing to undertake project specific testing where necessary to provide the assurance our customers and clients value so highly.

Sustainability

As a relatively new supplier to the market CDS has a keen eye on sustainability across the triple bottom line and will be striving develop our sustainability credentials in the coming months and years.

CDS already holds the FSC Chain of custody accreditation for our facility in Latvia and with the opening of our new manufacturing facility in Newtown, Wales in January 2019 we will carry FSC and PEFC accreditations for both plants.

Our manufacturing facilities reuse timber & MDF off-cuts as spacers in our packaging whilst non-reusable timber waste fuels our factory biomass heating systems.

Of course, we recognise the need for our industry to do more to reduce and recycle site waste and we are committed to working with our customers and fellow industry professionals in this important endeavour.

Financial

We've already made great strides in developing working procedures that have helped us improve efficiencies leading to significantly increased productivity and reduced lead times. We envisage this having a positive impact upon both our and our customers' financial sustainability.

Social/Community

Our new facility in Newtown will provide much needed employment opportunities in an economically deprived area of Wales. We recognise that there is a significant skills shortage across the construction industry and our inward investment in skills and training ensures high staff retention levels. This also reflects in the quality and finish of our products as we look to train and maintain a highly skilled workforce in preference to automation.

Door Hardware

CDS offer a comprehensive range of architectural ironmongery, that give the highest level of functionality and aesthetics.

We enjoy strong trading relationships with a number of leading ironmongery suppliers; **Winkhaus, Zoo Hardware, Orno Design, Rutland Door Controls, Assa Abloy, Salto, Dorma, Hoppe** and **TSS** to name but a few and we offer all our doorsets complete with recessed door furniture as well as a full range of surface mounted accessories such as kick plates, signage and even coat hooks.

However, should your project involve specific ironmongery requirements outside our normal scope of supply, subject to appropriate compliance checks by our in-house technical team, we'll be delighted to work with your preferred suppliers and to receive and fit their free issue ironmongery and accessories.
